Space Exploration

With space at the forefront of technology and discovery, there's always more to learn! Join our dynamic and exciting presenter team as they lead you through hands-on activities that will bring space exploration to life in your classroom. Brian Jackson is a science enthusiast and stellar middle school teacher and Don Hladiuk is a night sky aficionado who shares his passion for astronomy on the CBC's Eyeopener as the 'Starman'. Together, these presenters are a wealth of knowledge and will help you build confidence in covering the key curriculum objectives from this unit. The workshop will be hosted at Rothney Astrophysical Observatory, a unique learning facility that offers unobstructed views of the night sky.
