*Registration closes
January 24th at 7pm.*

Session Description:

Join us for this virtual Teacher Workshop aimed at grade 2 teachers. It goes without saying that this school year has been and still is extra challenging. Some teachers are coping with sanitation protocols, while others have the task of getting students engaged through a computer screen. In this workshop, science outreach specialist Jeffrey Newton will help you answer questions like “what are magnets and where do we find them?”, “how do magnets work?” and “can anyone see magnetic fields?”. You might be surprised at some of the answers yourself. We will cover all the basic concepts, some ideas for demos, activities, and how to modify some of these for at-home learners.
